                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 3
US-09-139-762A-53
US-09-139-762A-53
i Sequence 53. Application US/09139762A
j Patent NO. 6013453
i GENERAL INFORMATION:
i APPLICANT: Choo, Yen
j APPLICANT: Klug, Aaron
APPLICANT: Ranchez Garcia, Isidro
ITLE OF INVENTION: Improvements in or Relating to
ITLE OF INVENTION: Improvements for Recognition of DNA
ITLE OF INVENTION: Binding Proteins for Recognition of DNA
ITLE OF INVENTION: Binding Proteins for Recognition of DNA
MUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
STARET: 1100 New York Avenue, N.W.
CITY: Washington
STARET: D.C.
COUNTRY: USA
IT 20005-3918

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           COMPUTER REALBLE FORM

BEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/08/466,344

PILING DATE: 06-JUN-1995

CLASSIFICATION: 514

PRIOR APPLICATION NUMBER: 08/040,548

FILING APPLICATION DATA:

APPLICATION NUMBER: 31-MAR-1993

ATTORNEY/AGENT INPORMATION:

NAME: COUGHLIN, DANIEL F.

REGISTRATION NUMBER: 36,111

REGISTRATION NUMBER: 36,111

REPRENCE/DOCKET NUMBER: 36,111

REPRENCE/DOCKET NUMBER: 36,111

RELEPAK: (312) 744-0090

TELECOMMUNICATION INFORMATION:

TELEPAK: (312) 245-4961

INFORMATION POR SEQ ID NO: 19:

SEQUENCE CHARACTERISTICS:

LENGTH: 20 maino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   E: Arnold, White & Durkee

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-08-040-548-34

Sequence 34, Application US/08040548

Patent No. 5763209

Patent No. 5763209

TITLE OF INVENTION: METHODS AND MATERIALS RELATING TO THE TITLE OF INVENTION: FUNCTIONAL DOMAINS OF DNA BINDING PROTEINS NUMBER OF SEQUENCES: 67

CORRESPONDENCE ADDRESS: ADDRESS: ADDRESSEE Arnold, White & Durkee STRRET: 321 No. 5763209th Clark Street, Suite 800

CITY: Chicago STATE: Illinois

CONDUTER NEADABLE FORM: MEDIUM TYPE: Floppy disk COMPUTER IBM PC Compatible

COMPUTER: IBM PC Compatible

COMPUTER: IBM PC Compatible

COMPUTER: PatentIn Release #1.0, Version #1.25

CURRENT APPLICATION NUMBER: US/08/040,548
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match 100.0%; Score 7; DB 2; Length 26; Best Local Similarity 100.0%; Pred. Patent No. 6503717

GENERAL INFORMATION

GENERAL INFORMATION

APPLICANT: Liu, Qiang

APPLICANT: Rebar, Edward J.

APPLICANT: Sangame Biosciences, Inc.

TITLE OF INVENTION: Methods of Using Randomized Libraries of Zinc Finger

TITLE OF INVENTION: Proceins for the Identification of Gene Function

TITLE OF INVENTION UNMERS: US/09/731,558
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                     December 27, 2004, 19:21:38; Search time 15.85 Seconds (without alignments) 29.289 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 30, Sequence 30, Sequence 18,

US-09-478-681-30

i Sequence 30, Application US/09478681

i Patent No. 6607882

j GENERAL INFORMATION:

APPLICANT: Case, Casey Christopher

APPLICANT: Elsenberg, Stephen P.

APPLICANT: Bisenberg, Stephen P.

APPLICANT: Bracon K.

TITLE OF INVENTION: REGULATION OF ENDOGENOUS GENE EXPRESSION IN CELLS

TITLE OF INVENTION: USING ZINC FINGER PROTEINS

TITLE OF INVENTION USING ZINC FINGER PROTEINS

TITLE OF INVENTION USING ZINC FINGER

CURRENT FILLING DATE: 2000-01-06

NUMBER OF SEQ ID NOS: 43

SOFTWARE: PATENTIN Ver. 2.0

SEQ ID NO 30

LENGTH: 196

LENGTH: 196

TYPE: PRT

ORGANISM: Artificial Sequence

Patent No. 645342

GENERAL INFORMATION:

APPLICANT: Eisenberg, Stephen P.

APPLICANT: Case, Casey C.

APPLICANT: Cox III, George N.

APPLICANT: Jamisson, Andrew

APPLICANT: Sangamo Biosciences, Inc.

APPLICANT: Rebar, Edward J.

APPLICANT: Rebar, Edward J.

TITLE OF INVENTION: Selection of Sites for Targeting by Zinc Finger

TITLE OF INVENTION: Description and Methods of Designing Zinc Finger

TITLE OF INVENTION: to Bind to Preselected Sites

TITLE OF INVENTION: UNBER: US/09/229,007A

CURRENT APPLICATION NUMBER: US/09/229,007A

CURRENT FILING DATE: 1999-01-12

SOFTWARE: PatentIn Ver. 2.1

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    OTHER INFORMATION: Description of Artificial Sequence: nucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 69, Application US/09173941
Patent No. 6140081
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: ZINC FINGER BINDING DOMAINS FOR GNN FILLE REFERENCE: NOV0081S
CURRENT APPLICATION NUMBER: US/09/173,941
CURRENT FILING DATE: 1998-10-16
NUMBER OF SEQ ID NOS: 120
SOFTWARE: Patentin Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Issued Patents AA:*

Sequence 2, Application US/09240179

Patent No. 6410248

GENERAL INFORMATION:

APPLICANT: Greisman, Harvey A.

APPLICANT: Pabo, Carl O.

APPLICANT: Pabo, Carl O.

APPLICANT: Massachusetts Institute of Technology

TITLE OF INVENTION: Finger Proteins for Diverse DNA Target Sites

TITLE OF INVENTION: Finger Proteins for Diverse DNA Target Sites

TITLE OF INVENTION NUMBER: US/09/240,179

CURRENT FILING DATE: 1999-01-29

CURRENT FILING DATE: 1999-01-29

MUMBER OF SEQ ID NOS: 65

SOFTWARE: PatentIN Ver. 2.0

SEQ ID NO 2

LENDING: APPLICATION NUMBER: US 60/073,223

EARLIER FILING DATE: 1998-01-30

SEQ ID NO 2

LENDING: PatentIN Ver. 2.0

SEQ ID NO 2

LENDING: APPLICATION NUMBER: US 60/073,223
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gapa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ; OTHER INFORMATION: Description of Artificial Sequence:Zif268 zinc ; OTHER INFORMATION: finger 2 US-09-240-179-2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 22, Application US/09731558
Patent No. 6503717
GENERAL INFORMATION:
APPLICANT: Case, Casey Christopher
APPLICANT: Liu, Qiang
APPLICANT: Liu, Qiang
APPLICANT: Sangamo Biosciences, Inc.
TITLE OF INVENTION: Methods of Using Randomized Libraries of Zinc Finger
TITLE OF INVENTION: Proteins for the Identification of Gene Function
FILE REPERENCE: 019496-002310US
CURRENT APPLICATION NUMBER: US/09/731,558
CURRENT FILING DATE: 2000-12-06
FRIOR APPLICATION NUMBER: US 09/456,100
FRIOR APPLICATION NUMBER: US 09/456,100
NUMBER OF SEQ ID NOS: 24
SOFTWARE: PatentIn Ver. 2.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 22, Appl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                          December 27, 2004, 19:21:38; Search time 15.85 Seconds (without alignments) 29.289 Million cell updates/sec
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1: /cgn2_6/ptodata/1/iaa/5A_COMB.pep:*

Sequence 238. Application US/09989789
Fatent No. US20020063379A1
GENERAL INFORMATION:
APPLICANT: LIU, Qiang
TITLE OF INVENTION: POSITION DEPENDENT RECOGNITION OF GNN NUCLEOTIDE
TITLE OF INVENTION: TRIPLETS BY ZINC FINGERS
FILE REFERENCE: 8325-0011.20 / S11-US2
CURRENT APPLICATION NUMBER: US/09/989,789
CURRENT FILING DATE: 2002-03-25
NUMBER: OF SEQ ID NOS: 4085
SEQ ID NO 238
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 239, Application US/09889789

Sequence 425, Application US/09989789

Patent No. US2002063379A1

GENERAL INFORMATION:
APPLICANT: LIU, Qiang
TITLE OF INVENTION: POSITION DEPENDENT RECOGNITION OF GNN NUCLEOTIDE
TITLE OF INVENTION: TRIPLETS BY ZINC FINGERS
FILE REFERENCE: 8325-0011.20 / S11-US2
CURRENT APPLICATION NUMBER: US/09/989,789

CURRENT FILING DATE: 2002-03-25
NUMBER OF SEQ ID NOS: 4085
SOFTWARE: Patentin Ver. 2.0

Sequence 44, Application US/09779233

Patent No. 6689558

GENERAL INFORMATION:

APPLICANT: Case, Casey, TILE OF INVENTION:

TITLE OF INVENTION: CELLS FOR DRUG DISCOVERY

FILE REPERENCE: 8325-0010

CURRENT APPLICATION NUMBER: US/09/779,233

CURRENT FILING DATE: 2001-02-08

NUMBER OF SEQ ID NOS: 45

SOCTHWARE: Patentin Ver. 2.0

SEQ ID NO 44
CURRENT FILING DATE: 2000-12-06
PRIOR PAPLICATION NUMBER: US 09/456,100
PRIOR FILING DATE: 1999-12-06
NUMBER OF SEQ ID NOS: 24
SEQ ID NO 14
LENGTH: 7

TITLE OF INVENTION: Methods of Using Randomized Libraries of Zinc Finger
TITLE OF INVENTION: Proteins for the Identification of Gene Function
FILE REFERENCE: 019496-003210US
CURRENT APPLICATION NUMBER: US/09/731,558
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                           (without alignments)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GENERAL INC. 807,802.
GENERAL INCORMATION:
APPLICANT: Cox III, George N.
APPLICANT: Case, Casey Christopher
APPLICANT: Edsenberg, Stephen P.
APPLICANT: Eisenberg, Stephen P.
APPLICANT: Spratt, Sharon K.
TITLE OF INVENTION: REGULATION OF ENDOGENOUS GENE EXPRESSION IN CELLS
TITLE OF INVENTION: USING ZINC FINGER PROTEINS
FILE REFERENCE: 8325-0002.10 / S2-US3
CURRENT APPLICATION NUMBER: US/09/478,681
CURRENT FILING DATE: 2000-01-06
NUMBER OF SEQ ID NOS: 43
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    OTHER INFORMATION: Description of Artificial Sequence: VEGF1 ZFP OTHER INFORMATION: construct targeting upstream 9-base pair target : OTHER INFORMATION: site in VEGF promoter US-09-229-037-15

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                    (without alignments)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
